Git

PROJECTS

react scss vite   ☌

CarRental

This website allow users to rent cars, CarRental is only Front-end. Develop with React js and Designed with Scss for runtime environment I use Vite and Npm, whole webapp code is arrangend in very Optimize manner, also this is fully Responsive project

react css motion   ☌

Homyz

Anyone can buy their dream home with homyz, this is a simple yet complex Front-end I use lots of React components like Carousel, Icons and Motion js by developing this webapp I learn a lot about how to build production ready application, This project is build with Vite and Yarn package manager.

react css firebase   ☌

Netflix-Clone

Finally I have build my favorite Streaming platform, I use TMDB api and axios for rendering it on homePage and with Firebase I give this clone Login/Signup functionality, for payment & subscription I use Stripe payment and Raw CSS for designing.

→*I have created this clone with a lot of hard work and dedication, but on hosting the browser throws warning about the danger site, I have sent requests, but still this problem is not resolved, so I am posting screenshots and videos from the local host, thank you* ↓
